SUSTAINABLE

We use up to 70 PET bottles to produce one square meter of ECHO**JAZZ** acoustic absorbers. We offer a product-stewardship-program, in which our products are shredded and used as filling material for our acoustic columns.

ROBUST & LOW MAINTENANCE

EchoBoard® products are hardly ductile and therefore very shape-resistant and tearproof. The cleaning is carried out by means of a (vacuum cleaner. Strong soiling can be removed with all commercially available carpet cleaners without leaving residues.

ACOUSTIC

The open and highly compressed felt structure is more effective than conventional acoustic composites. Though 40% thinner, the EchoBoard® products achieve comparable absorption rates as conventional high-performance acoustic absorbers.

MOISTURE REGULATING

PET-felt absorbs moisture from the environment and releases it again. This contributes to a improved room climate. Since the fiber hardly absorbs water, no mold infestation can arise.

EMISSION FREE

Measurements have shown that by colouring the PET in the liquid state, ECHO**JAZZ**® products are practically emission-free. In addition, the material does not emit any dangerous fibers that may be inhaled.

LIGHTFASTNESS

The fibers of the PET composite are dyed in the liquid state. EchoBoard® products achieve the highest requirements for application in commercial projects.

FIRE PROCTECTION

EchoBoard® 12mm meets the highest European standard (B-s1, d0) of flame retardant materials. In the event of a fire, the material emits no to slight smoke and doesn't produce flaming droplets.

EASY PROCESSING

EchoBoard® products are cut on the CNC cutting plotter. Adaptation work takes place dust-free on site by using carpet knife. Other means of processing include crown drill, circular- or jigsaw.

HEAT STORAGE

EchoBoard® products store heat from the ambient air and delivers it when the air temperature drops. This contributes to lower energy costs and a stable and comfortable room climate.

ACOUSTICS AND ENVIRONMENT

For ECHO**JAZZ**, acoustics as well as the environment are a strong inspiration to find innovative and sustainable solutions. The EchoBoard® is made of 100% PET with more than 50% recycled PET bottles and, due to its recyclability, is a direct answer to questions of ecological and economic sustainability that arise in modern architecture, interior design and renovation.

In addition, ECHO**JAZZ** offers its customers the opportunity to return products at the end of their life cycle as part of a product stewardship programme.

ECHO**BOARD® FOR BETTER ROOM ACOUSTICS**

For sound absorption and for optimal room acoustics you will find elegant acoustic ceilings, acoustic lights, acoustic walls and acoustic room dividers. All products are made of our EchoBoard® material and consist of 100% PET fibres.

ECHO**SAIL® ACOUSTIC CEILINGS**

ECHO**JAZZ** offers an wide range of EchoSail® acoustic sails. However, if you send us the plan specifications of your own design as a vector file, we can cut almost any other shape or perforation to fit your concept. If you need planning support from our specialists, please contact us and we will be happy to advise you!

SUSPENSION FRAME WITH SAFETY HOOKS

ECHO**SAIL® 12MM**

Acoustic sails in various shapes and surface designs including suspension system up to 1500mm. The EchoSail® is directly screwed and suspended up to a length of 1000mm. For all shapes, which are longer than 1000mm, the EchoSail® is suspended with frame and safety hooks. The frame is white as standard and can be delivered in other colours on request.
Sound absorption: aw 0.90, Class A
Edge processing: 90°, Corner radius 200mm

ECHO**BAFFLE® ACOUSTIC CEILINGS**

Our acoustic baffles offer an optimal solution for open ceilings, where easy access to building services or the thermoactive air exchange of chilled ceilings must be guaranteed.

Our standard products EchoBaffle® PLAIN, WAVE and EDGE convince by their easy installation by means of a tool-free plug-in system. The mirroring of the segments creates coherent forms which give the room a lot of dynamics. To avoid disturbing joints between the individual baffles, we can connect the elements endlessly and inconspicuously with each other by means of “invisible” puzzle connections. This creates a unitary and closed ceiling pattern without preventing quick access to the ceiling. If the ceiling design is to become a real eye-catcher, we are happy to help you develop a completely individual solution. The ECHO**JAZZ** team supports you from the initial consultation to the creation of cutting and installation plans: Your inspiration is our challenge!

ECHO**BAFFLE® 12MM**

Acoustic baffle design consisting of 10 baffle segments, including substructure and suspension system.
Sound absorption: aw 0.90, Class A
Individual EchoBaffle® solutions on demand!

ECHO**LED® ACOUSTIC LIGHTING**

The EchoLED® EQ4 was developed as an elegant and fully integrated workspace light and is manufactured in Switzerland.

EchoLED® EQ4 allows the user to control the light individually by means of a switch on the table or an app. The set-back light exit of 8mm offers a glare-free light, which is hardly visible in the room. The closed four-module can be delivered ready to plug in and can be connected or replaced like a floor lamp. The lamps are integrated flush in the high-performance absorber. Our products are equipped with DALI drivers as standard and offer all the possibilities of digital lighting control.

The EchoLED® LINEAR is integrated flush into the high-performance absorber. The installation of the ceiling sails and the lighting is done in a single operation. All maintenance work on the luminaire can be carried out from below without having to remove the ceiling sail. The modular design of the housing guarantees easy adaptation to future lighting technologies.

The EchoLED® family is characterised by excellent glare reduction values (UGR < 19) and very high energy efficiency. It is equipped with DALI drivers as standard and offers all the possibilities of digital lighting control.

ECHO**FIELD®** **ACOUSTIC WALLS**

The EchoField® product range is a wall absorber with a wall spacer and is available in 4 shapes. The powder-coated metal frame can be simply plugged in and suspended by means of a wall profile. The cavity and the lateral terminations ensure optimum acoustic performance. Wall absorbers can offer an effective alternative to acoustic ceilings, especially in small and narrow rooms. ECHO**JAZZ** acoustic absorbers are extremely robust and can be cleaned easily. They are therefore particularly suitable when they are touched or bumped against in daily use.

ECHO**BRICK® ACOUSTIC WALLS**

EchoBrick® is an acoustic absorber that was primarily developed for use in wall areas. Wall absorbers can be an effective addition or alternative to acoustic ceilings, especially in small and narrow rooms.

In order to improve the acoustic effect, the 12mm material in particular should be mounted on the wall at a distance of 50mm. The 24mm material achieves an aw value of 0.50 even with a direct installation.

EchoBrick® offers a standard range of 16 products, shapes and material thicknesses which can be combined with each other. The edges of each Brick® are finished with a 6mm deep 45° bevel. This creates intentional shadow lines at the edges of the bricks. The installation is done with EchoGlue®, our biodegradable spray contact adhesive. Adjustments are made quickly and dust-free.

ECHO**BRICK® 12MM**

Acoustic wall tiles with chamfer. Installation using biodegradable EchoGlue® spray adhesive (included)
Sound absorption: aw 0.30/0.60 (0mm/50mm air gap)
Special dimensions and designs on request

ECHO**MONOC® ACOUSTIC WALLS**

EchoMonoc® is the logical further development of our EchoBrick® collection and is available in 12mm and 24mm material thickness. The product is manufactured in large format to create monochrome surfaces.

The wall absorbers can offer an effective alternative to acoustic ceilings, especially in small and narrow rooms. ECHO**JAZZ** acoustic absorbers are extremely robust and can be cleaned easily, especially when touched or bumped against in daily use. The 24mm material achieves an aw value of 0.50 even with a direct installation. To further improve the acoustic effect, the elements can be mounted on the wall at a distance of 50mm. The edges of each EchoMonocs® are finished with a 45° bevel. (Exception: EchoMonoc® VERTIGO with a 30° bevel) The installation is done with EchoGlue®, our biodegradable spray contact adhesive. The elements can be individually cut to size at the construction site.

ECHO**CURTAIN® ACOUSTIC ROOM SEPARATOR**

As an acoustic room divider in the open-space office, the EchoCurtain® offers a flexible and transparent solution in the two material thicknesses 12mm and 24mm, with a perforation of maximum 20%. The EchoCurtain® is suspended directly from the ceiling using steel cable suspension. On request we can offer EchoCurtain® with a rail system. In addition to our standard designs, we are also happy to produce individual solutions. Our design team will support you in design and data creation.

ECHO**TORRENT® ACOUSTIC ROOM SEPARATOR**

EchoTorrent® is a flexible room dividing element which can be used up to 4m room height. The clamping elements are screwed tightly to the ceiling and floor. The acoustic elements are clamped to the connecting cables and can be individually adjusted in height. The elements are available in 12mm and 24mm material thickness, in two sizes and 21 colours.

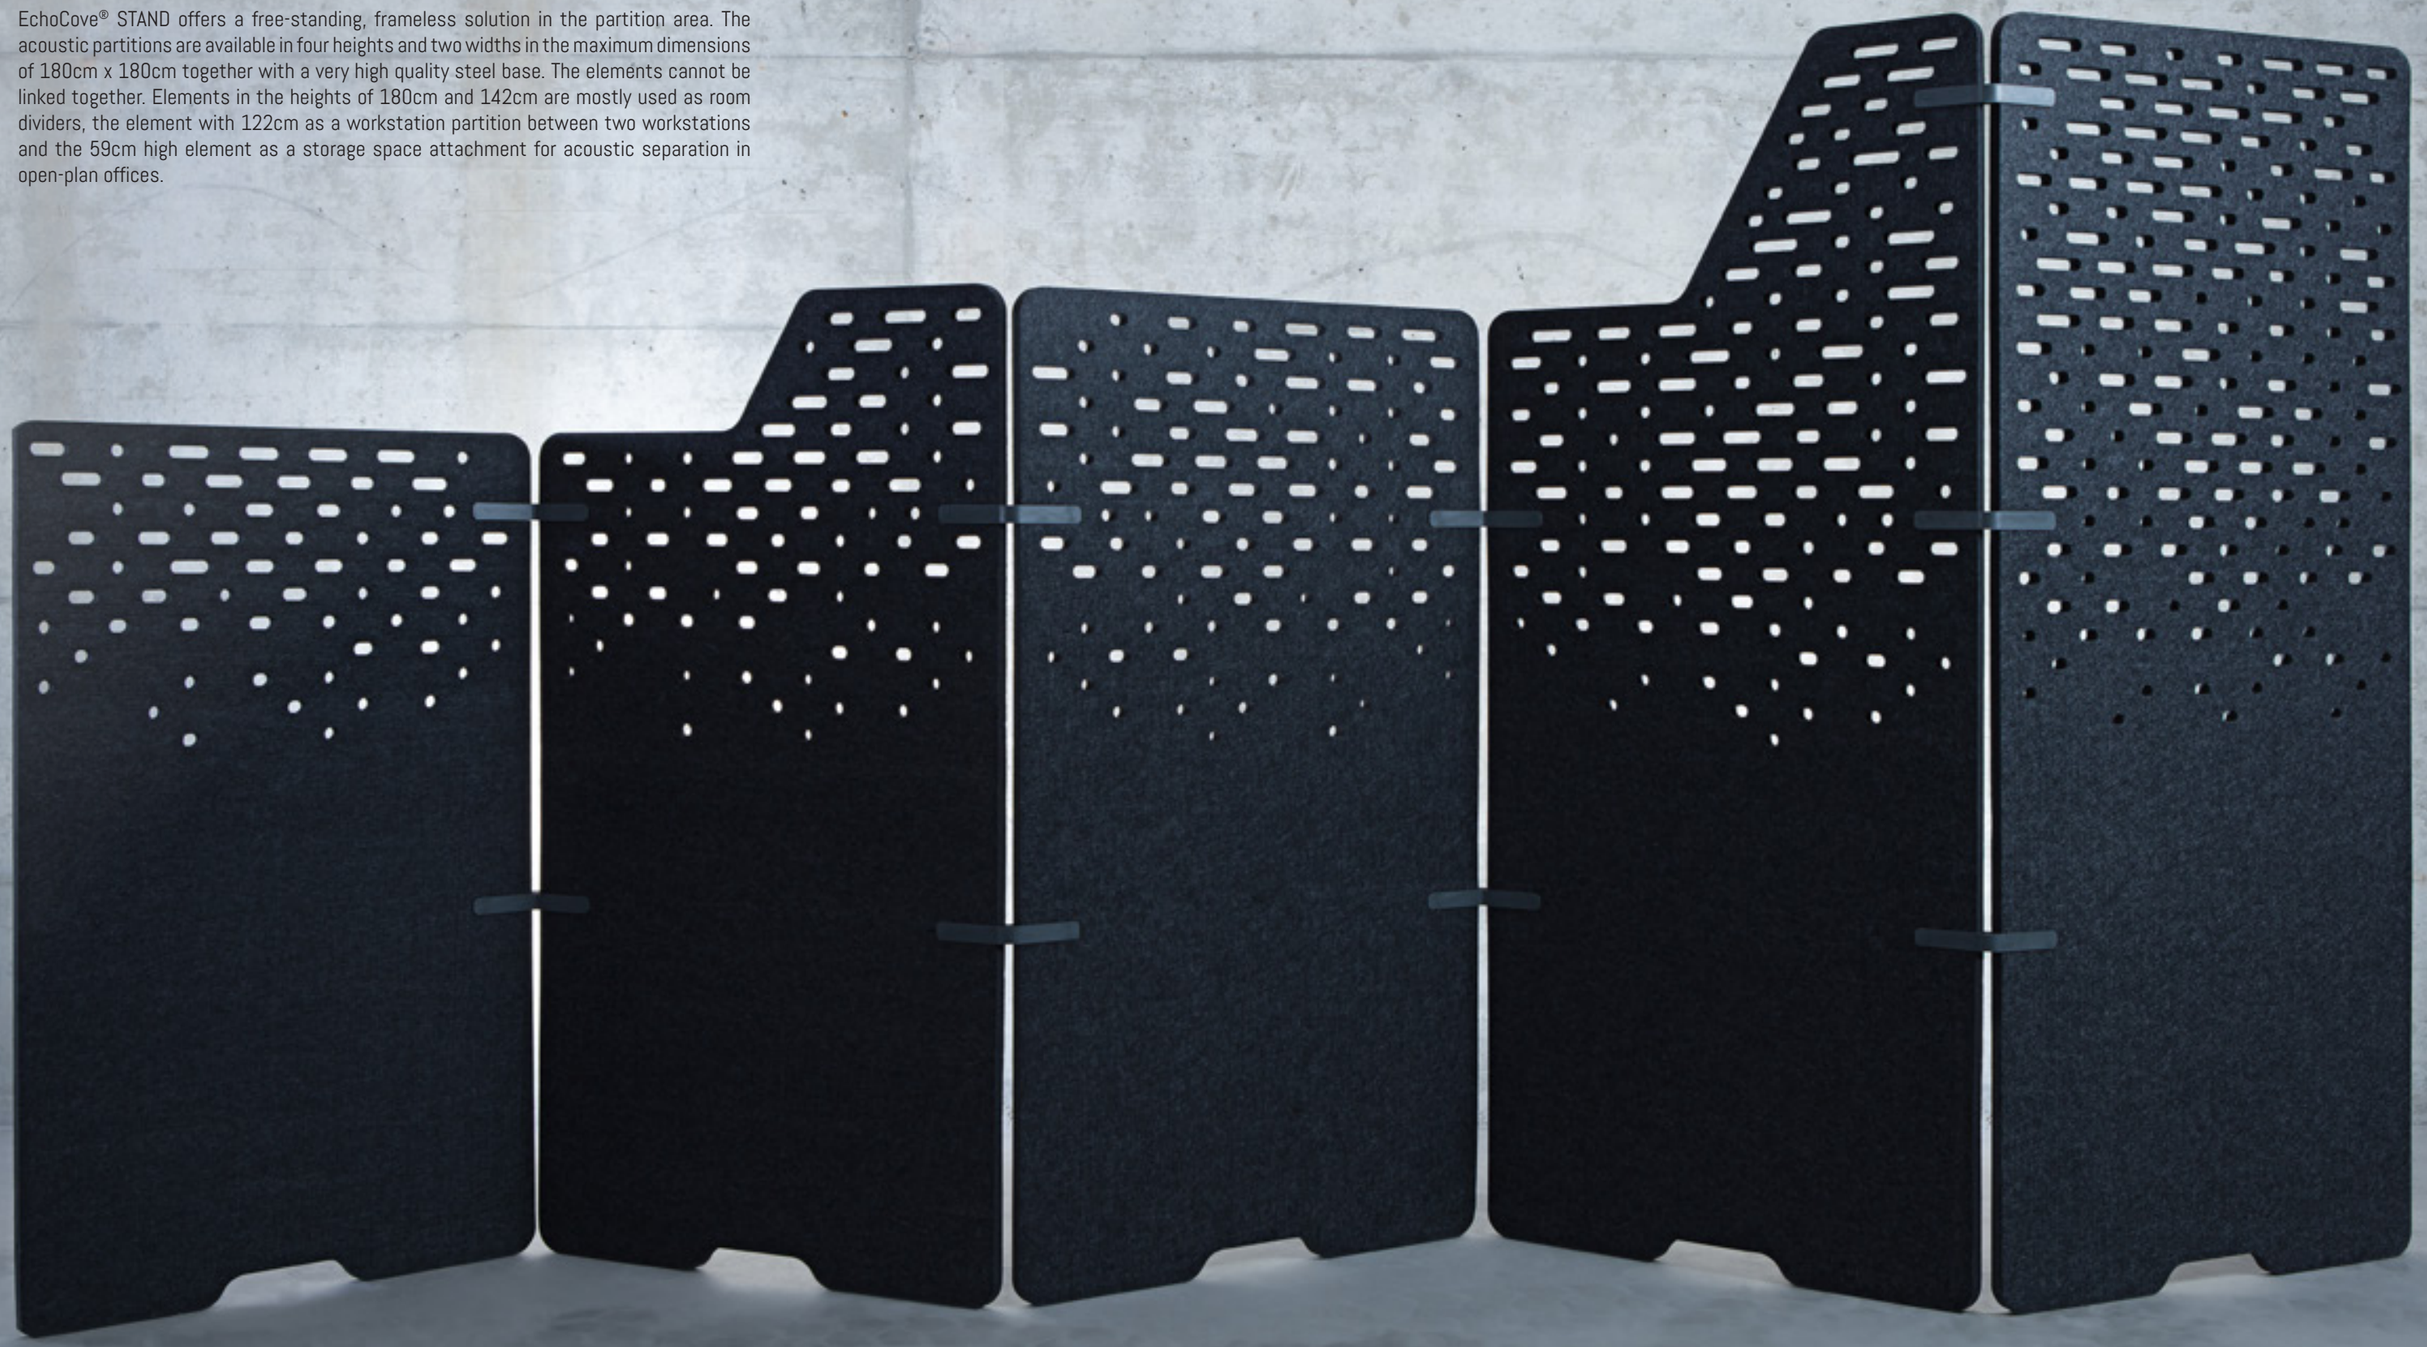
ECHO**COVE® ACOUSTIC ROOM DIVIDERS**

With the EchoCove® family, ECHO**JAZZ** offers a wide range of acoustic products for various office situations: For the desk, as a modular room divider or even a mobile partition on wheels. No installation manual is required for the EchoCove® room dividers. The handy dividers can be combined with simple plug-in joints without tools. The elements can be pinned and the relatively high density of the material allows for frameless construction.

EchoCove® STAND offers a free-standing, frameless solution in the partition area. The acoustic partitions are available in four heights and two widths in the maximum dimensions of 180cm x 180cm together with a very high quality steel base. The elements cannot be linked together. Elements in the heights of 180cm and 142cm are mostly used as room dividers, the element with 122cm as a workstation partition between two workstations and the 59cm high element as a storage space attachment for acoustic separation in open-plan offices.



ECHO**COVE® 24MM ECO 79**

Frameless movable acoustic wall elements with individual configuration excl. EchoCove® JOINER connectors (no tools required).
Sound absorption: aw 1.00, Class A
Special dimensions and designs on request
Please specify the Joiner type when ordering. (Page 68)

DO YOU ALREADY KNOW ABOUT ECHO**COUSTIC®?**

The EchoCoustic® is a high quality sound absorber which can be mounted on walls and ceilings without any spacing, achieving a sensational sound absorption of 85%. Compared to the EchoBoard®, the EchoCoustic® is 3-layered with a material thickness of 25mm. EchoCoustic is also made of 100% PET, of which at least 50% is recycled. The surface impresses with its beautiful and smooth high-tech felt and is available in 34 colours. The middle layer gives the EchoCoustic® its stiffness and makes the product pinable. The base is responsible for the excellent acoustic values, especially in the low frequency range.

The installation of the EchoCoustic® is extremely easy, which is supported by the optional frame. Since the EchoCoustic® is mounted directly on the wall or ceiling, the loss of space is very small and the acoustic performance is excellent.
